

THERMOSTATIC MIXING VALVE

BASIC SERIES VTA350, VTA550

The ESBE thermostatic mixing valves series VTA350 and VTA550 offer high flow capacity and good functionality for universal applications, such as domestic hot water with or without HWC (hot water circulation).

OPERATION

The series VTA350/VTA550 are the number one choice for domestic hot water systems requiring an in-line scald safe* function and where further temperature control devices have been installed at the water taps. These series of valves are also suitable for domestic hot water installations equipped with HWC (hot water circulation).

FUNCTION

Symmetrical flow pattern. Scald safe*.

VERSIONS

The product range includes a wide choice of valves delivered with integrated check valves which facilitate easy installation and maintenance.

Supplied with a top cover, unless otherwise stated.

*) Scald safe means that in the case of a cold water failure, the hot water supply shuts off automatically.

MEDIA

These valves can handle the following types of media:

- Fresh water / Potable water
- Closed systems
- Water with antifreeze additive (glycol ≤ 50% mixture)

INSTALLATION EXAMPLES

The shown applications are only examples of product use! Before using the product in any application, the regional and national regulations need to be checked.
