CONTROL VALVE PN16 SERIES VLE300

The ESBE control valves series VLE325 are provided with flanges and are especially designed for replacement of STL-valves in existing applications.

Flange PN16

MEDIA

These valves can handle the following types of media:

- Hot and cold water.

- Water with antifreeze additives such as glycol.

If the valve is used for media at temperatures below 0°C (32°F), it should be equipped with a stem heater in order to prevent ice formation on the valve stem.

CONTROL VALVE DESIGNED FOR

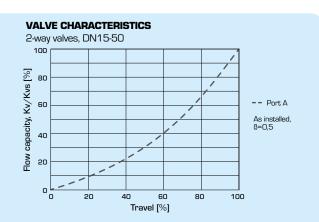

- Heating
- Comfort Cooling Ventilation
- District Heating District Cooling

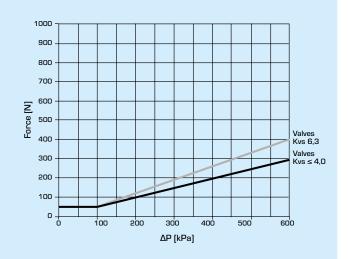

SUITABLE ACTUATORS

- Series ALB140
- Series ALFxx1 Series ALFxx4

TECHNICAL DATA	
Type:	2-way plug valve
Pressure class:	PN16
Flow characteristic A-AB:	EQM
Stroke:	20 mm
Rangeability:	
Leakrate A-AB, - DN 20-25:	max. 0,02% of Kv 4
ΔP _{max} *:	see graph below
Temperature of medium:	max. +130°C
<u></u>	min20°C
Media: Heating water (in	accordance with VDI2035)
	/ Glycol mixtures, max. 50%
Water /	Ethanol mixtures, max. 28%
Connection:	
* ΔP_{max} = Max. differential pressure for valve	e and actuator combinations.
Material	
Body:	Bronze Rg5
Flanges:	Steel SS 1914
Stem:	
Plug:	
Seat:	
Blind plug:	
Seat seal:	
Packing box seal:	

PED 2014/68/EU, article 4.3 / SI 2016 No. 1105 (UK)

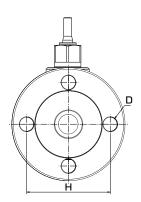

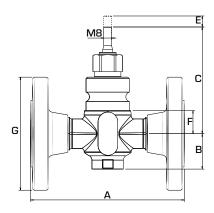

Required clamping force of the control unit for tightness 0.02% of Kvs.

CONTROL VALVE PN16

SERIES VLE300

2-WAY CONTROL VALVE SERIES VLE325

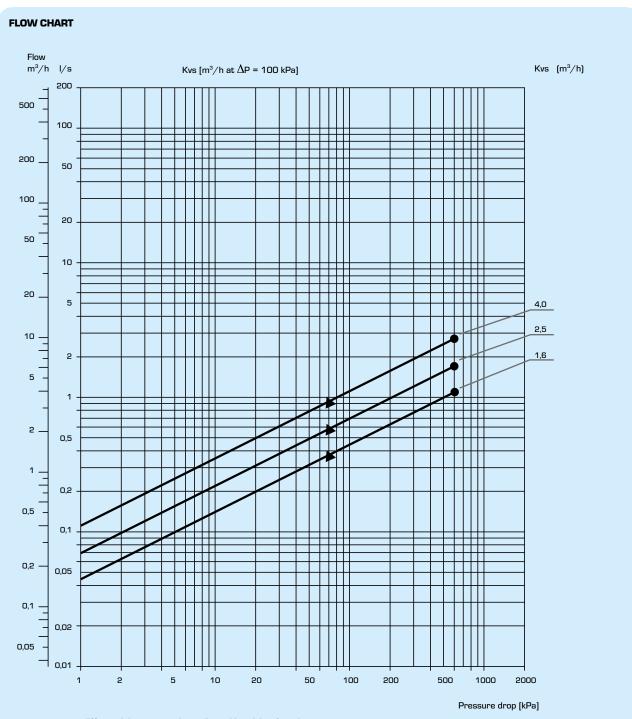

Art. No.	Reference	DN	Kvs*	А	В	С	D	Е	F	G	н	Rangeability Kv/Kv ^{min}	Weight [kg]
21400300	VLE325	20	1,6	143	36	110	4x14	20	24	105	75	>100	3,0
21400400			2,5										
21400700	VLE325	25	1,6			110	4x14	20	24	115	85	>100	3,7
21400800			2,5	156	36								
21400900			4										

^{*} Kvs-value in m³/h at a pressure drop of 1 bar.

CONTROL VALVE PN16

SERIES VLE300

- = max differential pressure drop allowed in mixing function
- ▲ = max differential pressure drop allowed in diverting function

To be considered: As both the viscosity and the thermal conduction are affected when glycol is added to the system water, this fact has to be considered when dimensioning the valve. A good rule is to choose one size higher Kv-value when 30 – 50% glycol is added. A lower concentration of glycol may be disregarded.

N.B.! Maximum 50% glycol for freezing protection and oxygen absorbing compounds are allowed as additives.

CONTROL VALVE PN16 SERIES VLE300

INSTALLATION

The valve should be mounted with flow direction in accordance with the valve marking.

If possible, the valve should be installed in the return pipe, in order to avoid exposing the actuator to high temperatures.

The valve must not be installed with the actuator mounted below the valve.

Mounting positions:

A = Allowed mounting position with fluid temperature between <math>-20°C to +120°C.

B = Allowed mounting position with fluid temperature between 0°C to +150°C.

C = Not allowed mounting position.

VALVE AUTHORITY $[\beta]$

 $\Delta p_{sus}^{"}$ - pressure losses over the system with variable flow [bar]

 Δp_{inst} - pressure losses over the installation [bar]

Recommendation : Valve authority [β] shall be between 0,3 to 0,7

a) 2-way valve

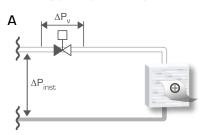

$$\beta = \frac{\Delta p_{v}}{\Delta p_{v} + \Delta p_{inst}}$$

To ensure that suspended solids will not become jammed between the valve plug and seat, a filter should be installed upstream of the valve, and the pipe system should be flushed before the valve is installed.

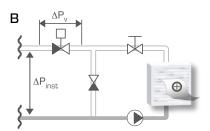

INSTALLATION EXAMPLES

2-WAY CONTROL VALVES

Installation without local circulating pump

Installation with local circulating pump
